

User guide

Mymesh Management System

A photograph of a modern glass skyscraper at night. The building's facade is composed of a grid of large glass windows. Through the windows, the interior of the building is visible, showing office spaces with desks, chairs, and people working. The interior lights are warm and yellow, contrasting with the cool blue and green tones of the exterior. The overall atmosphere is one of a busy, modern office environment.

Select the installation you want to edit

Login & Register

Go to Mymesh Management System (MMS)

MMS can be found via our website (<https://chess.nl/mms>) or a direct link (<https://mms.mymesh.nl>)

Sign In

- Fill in your registered E-mail address
- Use the password you chose for your MMS account
- Click 'Log in'

Select installation

In the left tab, on the home screen, you can find your installations.

- Click on the installation you want to edit.

Registration

In the current version, registration is allowed via the Mymesh Helpdesk.

- Please contact your official Mymesh Partner.

When you encounter difficulties in this process, please contact the Mymesh support desk on +31 23 5 149 149

Set your program

Schedule an event

Mymesh Calender

Schedule an event

Click on the day you want to schedule the event on. A pop-up will appear where you can set different preferences to precisely time your lighting installation.

Select groups

The MMS takes your rooms from the way your property was commissioned. Click on the icon next to the group field to select the groups you want to control.

Select a scene

All scenes that you made earlier appear in the column on the left. Choose a scene you want to activate.

Create a new scene

If you need a new scene, click on 'Create new...' on top of the left column.

- Give the new scene a name

Every day starts over at 0:00h. Press the + icon on the right to schedule a new command.

- Set a time for the command
- Set a command option from the drop-down menu.
(These are described on the next page.)
- Press Save when you are done.
- Press Select on the button right

You can now change the dates to apply this schedule on other dates too.

- Press save

The calendar is now schedules but not activated. Activate the schedule via the pink button on the top right of the screen.

In order to optimise the robustness of the network, a control signal is repeated every 5 minutes. This makes sure that your system receives the command, even when your connection to the internet was temporarily suspended.

Different control options

Light control options

The MMS Calendar can be used to schedule different light control options.

Level

The Level control option sends a light intensity level to the selected group(s). It dims the lighting to the preferred level.

Automatic

In case you have an operational and autonomous sensor network in your building, the automatic option gives the command of the system back to the building's sensors. When you select any other command option than automatic, the system overrules automatic control.

4 Levels

This command option was specifically designed for the Horti Culture market. It enables holders of highly specialised lighting systems to control multi-driver lights. Using this option is not advised.

Switch

Connected is the new on.
